

## **Why do we need the 5 Es strategy?**

### **Video transcript**

For now, students' expression is down at the abyss. Experiencing learning, exploring and elevating original products are deep in the sea. What is above sea level is Examining – Critical thinking, which brings despair, not having tools to creatively solve problems.

Help children explore, experience, examine, elevate, express, with the Thinking-Together Creating Future resources.

So, Explore, Experience, Examine and Elevate will become fertile ground for flourishing grounded trees – Students expressing learning results.

Researched, practiced, written and painted by Michelle Korenfeld, Raising Creative Thinkers.

We believe that when we give students tools to explore, experience with ideas, examine them by formative assessment, elevating their learning products toward excellence, then students will express the learning they constructed with hope & curiosity, practicing creative problem solving and leveraging their human intelligence and values by AI.

Learn more about our books, rich learning units and PD, humanly researched and crafted by Michelle Korenfeld, at [Korenfeld-Creativity.com](http://Korenfeld-Creativity.com).
